

Course Name	Course Description
Trail 201: Stone Treadwork	Stone is the most resilient material to incorporate into trail construction. Soil is the fundamental building block. Shape is the key to linking the two. Learn how to influence water, reinforce trail tread, and make durable the walking surface of the trail itself.
Dispersed Camping Area's	Camping is one of the biggest hurdles to hiking the Trail. Learn the in's and outs of what's needed to establish a Dispersed Camping Area, and how to monitor them once established.
Inventorying Infrastructure	We know how long the Trail is but we don't know exactly how many bridges, boardwalks, retaining walls and kiosks, or what condition they are in, that are out there. Learn how to use your smartphone to help inventory constructed features and pin point the where's and why's of the many control points of trail maintenance and construction projects.
Reach New Volunteers by Refining your Message	New volunteers are always needed to grow and sustain the Ice Age Trail. Learn to become comfortable with creating a tailored messaged designed to garner new volunteers interested in participating in chapter volunteer events.
Signage 101	Learn the bread and butter of Trail signage: How to site blazes, best practices for painting blazes, and how to maintain signage and signage sight lines.
Intro to Fire	Learn when and where fire may be an appropriate tool for managing vegetation in and around the Ice Age Trail, the Alliance's protocols for safely working with fire, the basics of fire behavior and how to further your fire education.
Operational Leadership	Join NPS staff, Dan Watson, as he shares a 360 degree view of what and how to quickly assess hot-spots when planning and executing events of all types, on or off trail.
First Aid/CPR/AED	Need to recertify? Looking to become certified? Learn what you need to know and what to do if and when injuries happen.
Chainsaw Safety	Using a chainsaw is inherently dangerous. Re-up, or attain safety certification, to keep you - and those around you - safe. Application required.
Intro to Camp Chef	Those belly-filling and soul-replenishing meals don't magically appear under the big top at the end of the day; they take many hands and learned hours to plan, prep, cook, and deliver. Join us for a gut-check on safe meal preparation for large groups.
Trail 202: Trail Plumbing	Water and the erosion it can cause are perennial threats to sustainable Trail. Learn how water impacts the trail and how to mitigate it's effects by building features like drainage dips and swales and working with, not against, natural forces.
